From unfamiliar reports to traceable values

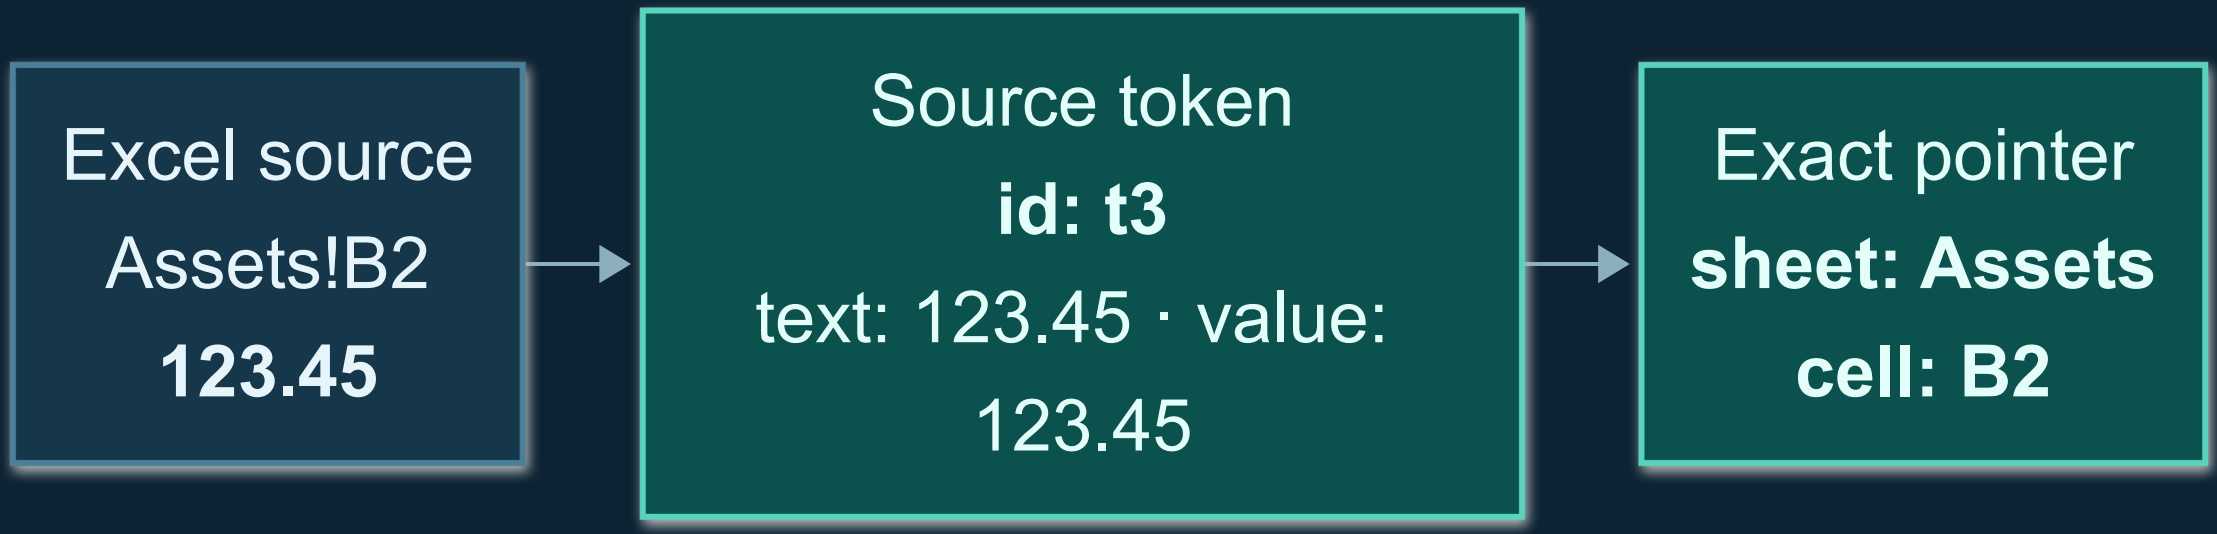

The model interprets layout. Code reads the amounts.

Source evidence stays attached through JSON, workbook and review.

Capture evidence before assigning meaning

One Excel cell, three linked facts.

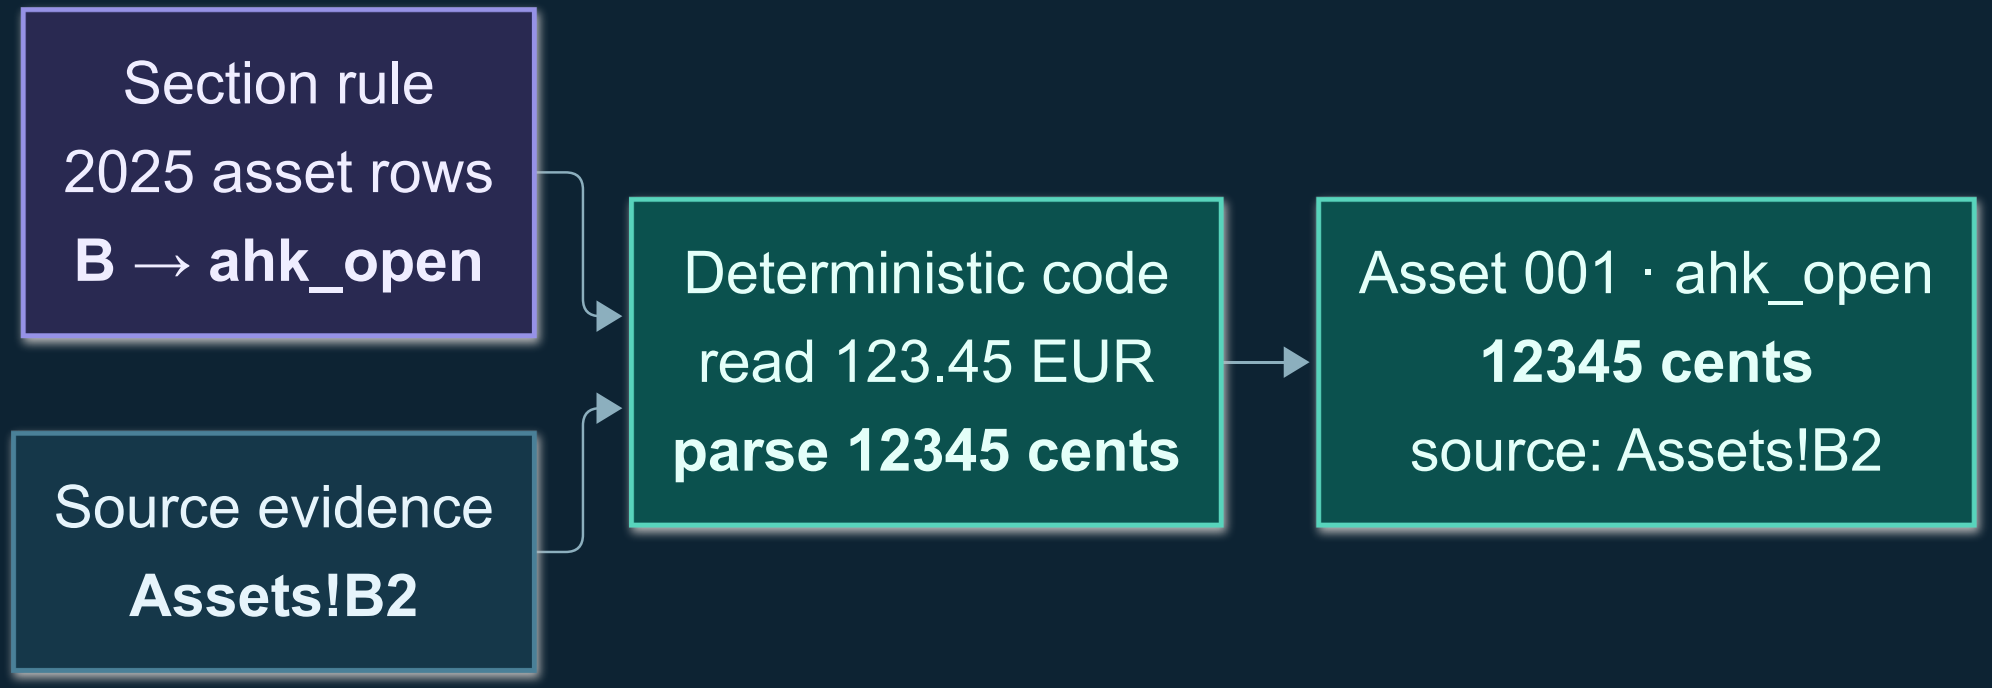

Stable handle · untouched source value · exact location

Example fields from the native Excel evidence format.

Map the meaning. Retrieve the amount.

A section rule maps column B across matching asset rows.

Preserve printed discrepancies. Abstain when evidence is missing.

One example output; the section rule applies across the table.
